For this tutorial you will need the following spared parts and tools that you cant get at our online store Impextrom.com
Click on a tool for visit the website.

Opening tool
Smartphone, tablet

2,19 €

Anti-static tweezer
tips VETUS ESD-249

4,74 €

Terminal opening
tool, plastic

0,71 €

Step 1 - Upper back cover

We will start to undo the upper back cover to be able to remove the SIM card and the SD.

Step 2 - Back case

Now we will dismantle the back cover. To do this we will introduce an opening tool between it and the frame and going around the contour, unhook the notches that hold it.

We will be careful with the buttons as they will fall out of the case.

Step 3 - Cameras

To finish, we disconnect the cameras from the motherboard and take them off.
