For this tutorial you will need the following spared parts and tools that you cant get at our online store Impextrom.com
Click on a tool for visit the website.

Screwdriver with 28
tips JK 6032-A

5,51 €

Step 1 - Remove back cover

We start by removing the seventeen screws that hold the lower cover to be able to remove it.

Step 2 - Disconnect components

We disconnect the contacts from the battery.

Step 3 - Drums

Now all you have to do is remove the four Allen screws that hold the battery to the chassis.
